
Spill Containment Systems

- IntraPack's Spill Containment System is a modular design that customizes for any new or existing application.
- All containment walls are 4" high and manufactured from 12 gauge metal coated in acid resistant Safety Yellow Powder Coat Paint.
- Neutralizing pillows absorb and neutralize battery acid. The pillows change color, indicating an exposure to acid. The pillows are designed to fit easily around any battery rack configuration. Pillows are made of fire retardant cloth. Different pillow sizes are available to better fit around your specific rack configuration.
- Acid-resistant caulking sealant included to seal metal barrier seams and for bonding spill containment to floor.
- Each individual Spill Containment System contains these standard items that a technician would need for proper installation:
 - Caulk Gun and Sealant
 - Neutralizing Pillow
 - Drill Bit
 - Assembly Hardware
 - Dust Mask
 - Gloves
 - Anchor Bolts
 - Safety Glasses
 - Installation Instructions
- Optional items are available such as:
 - Epoxy
 - Safety Protection items
 - Epoxy Application Kit
 - Safety Sign
 - Spill Response kits
 - Aisle Mats
- Little to no maintenance required after final installation.
- IntraPack personnel are available for installation.
